

1 **ABSTRACT OF THE DISCLOSURE**

2 A positioning foot for an instrument stand having legs extending out of the
3 instrument stand, has pads adapted to be respectively mounted on a corresponding free
4 end of the legs, each pad having a through hole defined through the pad and a groove
5 defined in a side face of the pad, and spikes each pivotally received in a corresponding
6 one of the grooves of the pads to be alternatively extended out to engage with a surface
7 to provide a firm grip to the instrument stand.
